

With proper break in and care you can extend the life of your cotton wet mops. The first thing you should do when you get a new cotton wet mop is break it in. This break in removes the natural oils in the cotton and improves the mops performance.

Follow these simple steps to break in a cotton wet mop:

Step 1. Fill mop bucket with water and a diluted neutral floor cleaner. Use warm water and follow the makers directions for use of the cleaner.

Step 2. Immerse the mop head completely for 10 seconds and shake it to make sure that the cleaning solution permeates the mop fibers.

Step 3. Ring out the mop and repeat step two for up to five times.

Step 4. Dispose of the cleaning solution you used for a break in. Rinse your mop and bucket with clean water. Prepare a solution for any cleaning task you will be using them up for.
