MOP BASICS

ACS Products offers a wide variety of yarns to help you achieve your specific mopping needs more efficiently. The following information should assist you in selecting which mops are right for you.

YARN

The variety of mops is large because certain yarns are designed for a specific task. It's important to understand that selecting the proper yarn will enable you to achieve maximum efficiency.

CUT-END (Nonlaundryable)

These mops are more economical at purchase; however, cut-ends tend to fray, lint and unravel with steady use. This condition will lead to increased mop replacement.

LOOP-END

The loop-end mop performs more efficiently by resisting tangles without linting and fraying. These mops stand up to heavy use. Sewn-in tailband provides wide surface coverage without gaps. Some loop-mops may be laundered with care.

5" wide or 1-1/4" narrow vinyl coated mesh headband is more durable

A variety of quality yarns allow you to choose the right mop for the right job

Multi-Sewn, color-coded tailband provides wide surface coverage without gaps

Loop-Ends keep yarn from tangling, fraying and linting

Yarn	Applications	Advantages	Disadvantages
Cotton	General Use	Good absorption and retention Low initial cost	Needs to be broken in Produces lints and is slow-drying
Blends	Professionals who require a better, more durable mop	Ideal choice for performance durability and price Synthetic fibers add color	May shrink over time
Synthetic	Clean rooms and rough surfaces	Synthetic yarn fights bacteria, mold and mildew while providing superior strength	Higher cost Not as absorbent
Rayon	Applying liquids for finishes and disinfectants	Quick absorption and release Dries fast, is mildew resistant and lints less	Less liquid retention
